Mono-mode optical patchcords

Description and Technical Characteristics of the Product:

Optical duplex mono-mode patchcords are manufactured based on I-V(ZN)H type duplex patchcord cable.

The patchcord lengths are manufactured according to customer requests.

Each connector which leaves the factory is tested.

Their quality is guaranteed by performing loss measurements of each patch cable leaving the production line. Each patchcord is accompanied by a measurement report. Fibre optic patch cables can be terminated with ST, SC, FC, E2000, or LC-type connectors (in various combinations on both sides).

Notes:

The x value after the dot at the end of the code of each patchcord indicates the number of metres of the product ordered (if you want to order a 2-metre patchcord, enter 2 after the dot). Standard patchcords are available with x=1,2,3,5m.
