

Telephone fuse compartment, code: FU/TEL/F-12

Description and Technical Characteristics of the Product:

Optional accessory for detachable modules.

The compartment of gas surge arresters allows you to protect the telephone line from the dangerous effects of interference - surges from outside - on active equipment.

When a surge occurs, the gas surge arrester is destroyed thus protecting other line components from damage.

Special contacts located on both sides of the compartment ensure automatic connection of the centre strip to the back mount frame.

Technical parameters:

Mechanical:

dimensions (W x H x D) – 115x23x40

colour - grey

weight - 82g

enclosure material - non-flammable plastic UL94V0

connector material - silver-plated phosphor bronze.
