

Data Sheet

Single-line fuse, code: FU/TEL/F-13AR

Description and Technical Characteristics of the Product:

The fuse is an accessory of the telephone fuse compartment. Single-line three-electrode gas surge arrester allows you to protect the telephone line from the dangerous effects of interference - surges from outside - on active equipment. When a surge occurs, the gas surge arrester is destroyed, thus protecting other line components from damage. Special contacts located on both sides of the compartment ensure automatic connection of the centre strip to the back mount frame.

Technical parameters:

Mechanical:

dimensions (W x H x D) – 9x11x7

colour - grey metal electrodes

weight - 3g

Electrical:

Rated surge current

[8/20ms, a+b-e]: 20kA

Rated ignition voltage

[a-e, b-e]: 230 V \pm 20%

Rated alternating current

[a+b-e, 50Hz, 1s]: 10 A

Notes:

The fuse and the compartment are sold separately.
